Primrose Lodge, Belper, Tara, Co. Meath

After graduating from Maynooth University, I joined FNZ in the Czech Republic as a Technology Solutions Graduate. My role involved diverse and engaging work across multiple areas of the SDLC, not just development which I will go into more detail in the Experience section. I spent four months working as a tester, which gave me a unique perspective on software engineering. I gained a deeper understanding of QA, what they look for, how to make their lives easier through consistent documentation, and how to thoroughly evaluate defects and builds. I also supported production environments, monitored platform performance, and collaborated across departments to ensure stability and efficiency.

Before that, my time at Maynooth University was spent constantly learning new languages and tools, while staying engaged with the theoretical side of computer science. I explored subjects like machine learning, computer vision/haptics, networks, natural language processing and more, which led to a year-long internship with Oracle and graduating with a 2:1.

Education

Computer Science and Software Engineering at Maynooth University, Maynooth

Grade: 2:1

Experience

Associate Analyst Developer (Full Stack) at FNZ, Czechia Brno

July 2024 – December 2025

- Tech Stack: C# .NET MVC + REACT for modern newer projects. VB and HTML/Javascript for legacy projects.
- Platform Development: Full-stack development and design implementations with a key focus on reusability, scalability and maintainability
- Platform Monitoring & Maintenance: Continuously monitor platform (Including production) performance and ensure its stability, security, and optimal performance. Troubleshoot and resolve any platform issues or bugs under time constraints.
- Database Integration: Analysed and integrated new data sources into existing stored procedures and views to meet evolving business requirements.
- Team support: Establishing a reliable knowledgebase and support system, not only as someone they can reach out to but also having created repos and other documentation to effectively eliminate repeat questions.
- Quality Assurance Tester: Gained hands-on experience with defect tracking, regression testing, and release validation while also communicating with a diverse group of clients, developers, managers and effectively using SQL to thoroughly test our systems.

Release Engineer Intern at Oracle, Dublin

June 2020 - July 2021

- Handled automated tickets generated by translation-related software, ranging from simple typos to complex workflow issues.
- Resolved manual tickets submitted by customers, users, engineers, and PMs — covering product inquiries, bug fixes, and front-end updates.
- Developed, upgraded, and maintained automated tools to enhance workflow and filter large datasets.

Summer camp Computer Science Tutor at Maynooth University, Maynooth

June 2020 - August 2021

- Taught basic programming languages to a class of 30+ students aged 13–18, adapting lessons to suit varying skill levels and learning styles.
- Planned and delivered a full-day curriculum, ensuring consistent engagement and clear learning objectives.
- Explained complex programming concepts in an accessible and easy-to-understand manner during in person sessions.

Skills

C# .NET MVC

REACT/Typescript/JavaScript

SQL

Visual Basic

OOP

Git/Azure version control
